

DELASALLE HIGH SCHOOL

2017-2018 ASBESTOS NOTIFICATION

Federal legislation requires every primary and secondary school in the nation to complete stringent inspection for asbestos and to develop a plan of management for all asbestos-containing building materials. DeLaSalle High School has a goal to be in full compliance with the letter of the law and is following the spirit of the law as well. As a matter of policy, DeLaSalle shall continue to maintain a safe and healthful environment for our students and employees.

In keeping with this legislation, all DeLaSalle buildings have been inspected by EPA accredited inspectors and samples were analyzed by an independent laboratory. Based on the inspection, the school prepared and the state approved a comprehensive management plan for handling the asbestos located within its buildings in a safe and responsible manner.

Federal law requires surveillance every six months of each area containing asbestos. In addition, the law requires all buildings to be re-inspected every three years after a management plan went into effect. MacNeil Environmental, Inc. is accomplishing this surveillance under contract on behalf of DeLaSalle.

Short-term workers (outside contractors/vendors) are provided information regarding the location of asbestos in which they may come into contact. All short-term workers contact the school's maintenance department before commencing work to be given this information.

DeLaSalle has a list of the locations and types of asbestos containing materials found in the facility, a description and time-table for the proper management of those materials. A copy of the Asbestos Management Plan is available for review in the school office.

Questions related to the plan should be directed to MacNeil Environmental, Inc., at (800) 642-6730.
